

PATIENT INFORMATION

Patient Name: **David Miller**
Patient ID: **PAT-TEST-001**
Age / Sex: **61 yrs / Male**
Evaluated Eye: **OD**

SCAN INFORMATION

Scan Date: **2026-10-01**
Scan Type: **OCT RNFLT Map**
Input Status: **Analyzed**
Model Architecture: **Harvard-GD RNFLT CNN**

AI MODEL ESTIMATE

Classification: **No glaucoma-associated pattern detected**
Model-Estimated Score: **0.2%** (Clinical correlation required)
Disclaimer: *Research model estimate — not an autonomous clinical diagnosis.*

RNFLT SUMMARY (MICROMETERS)

Mean RNFLT: **57.1 μ m**
Median RNFLT: **56.0 μ m**
Min / Max RNFLT: **25.7 μ m / 105.7 μ m**
Physiological Reference: *Normal range: 80 - 110 μ m*

LONGITUDINAL MONITORING & SERIAL PROGRESSION

Serial Scan Comparison: Previous: 62.41 μ m | Current: 57.13 μ m | Observed Change: **-5.3 μ m**
Structural Trend: Observed structural change: -5.3 μ m
24-Month Forecast: *24-month forecast unavailable — validated progression model not currently connected.*
Glaucoma Stage: *Stage assessment unavailable. The current model provides binary classification estimate.*

Recent IOP History: 2026-09-15: 21.5 mmHg (OD)
Recent Visual Field: 2026-09-20: MD -4.2 dB (OD)

MANDATORY CLINICAL & RESEARCH NOTICE:

GlaucoMap is an investigational research and clinical decision-support prototype. AI-generated research estimate — clinical correlation required. GlaucoMap does not replace clinical diagnosis or treatment decisions. Highlighted Grad-CAM regions represent areas that influenced the model prediction and do not independently establish a diagnosis.
